

Cover Letter

Dear Team,

I have over eight years of experience building and maintaining scalable cloud and AI/ML platforms with AWS, Kubernetes, and Terraform.

In my current role as a Contract DevOps/MLOps Engineer, I migrated complex ML workloads to AWS EKS, automated internal pipelines with Argo Workflows, and improved autoscaling with Karpenter. I also integrated OpenSearch for vector search and deployed Langfuse for LLM observability, boosting performance and visibility across teams.

Before that, at Quantumsoft, I managed multi-cluster Kubernetes setups with 50+ microservices, implemented CI/CD with GitHub Actions + Argo CD, and created reusable Terraform modules that cut environment setup time from days to under an hour.

I'm pretty interested to discuss the job position and help the company scale its cloud platform and enhance delivery speed and stability.

Thank you for your time and consideration.

Best regards,

Anton Bugreev.

p.s. I am ready to provide the contact information of my team lead at my current place of work upon request to retrieve feedback about my work.
